

SAFEPASS ONBOARDING

Prior to returning to school, parents will register their students for ongoing symptoms screenings. This creates an account on MyWay Health EHR and each family member is assigned a unique ID and QR code.

Parents and students are required to complete 1) a short health survey, 2) a personality /attitudes survey, and 3) a COVID-19 risk assessment.

Analysis of this data establishes the current state of health in the school's extended community, and derives insights to make individual and organizational safety predictions based on reliable probabilities.

HEALTH SURVEY

PERSONALITY SURVEY

RISK ASSESSMENT

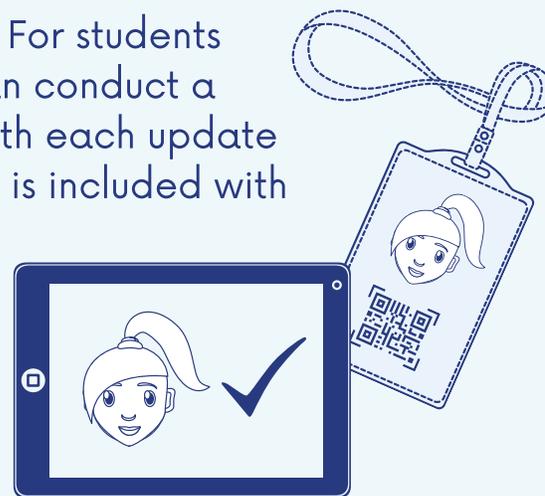

SYMPTOMS SCREENING

Before leaving home, parents will assess their student for coronavirus symptoms. If symptomatic, the student will be kept home. When students arrive at school, faculty and/or staff will scan the health passport QR code to ensure the daily symptoms survey and temperature screening has been logged.

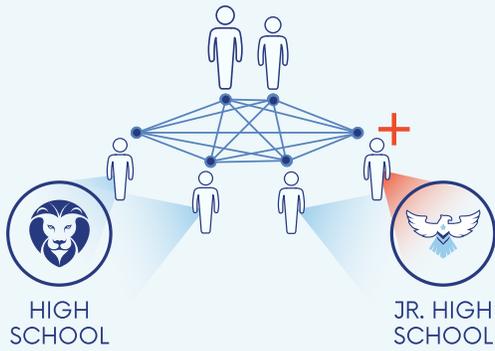

When scanning the QR code, the school's staff member will see a recent photo of the student with a "Verified" indicator. For students without a daily verified health passport, school staff can conduct a symptoms survey and temperature scan on the spot. With each update the ID of the person administering the survey and scan is included with a date, time, and location stamp.

Authentication and scanning devices are low-cost, mobile, easy to use, and simple to maintain. They are designed for teachers and parents to perform and log regular, multi-day temperature screenings.

COVID-19 SYMPTOMS INCLUDE

fever, cough, difficulty breathing, muscle pain, headache, runny nose and fatigue

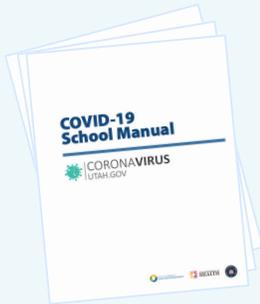

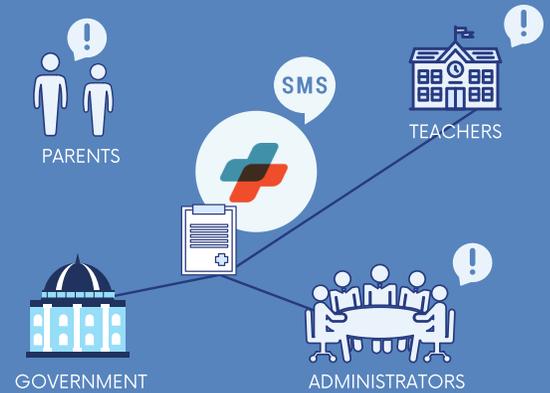

CONTACT TRACING

In support of broader contact tracing protocols, symptom scans establish in-school, social quarantine bubbles, alerting parties when symptomatic and positive testing contact occurs. Rolling out SafePass beyond a single school boundary extends risk mitigation in situations common to Utah families with siblings attending multiple school facilities.

ALERTS + REPORTS

Safety thresholds are set to alert parents when their student comes into contact with potential exposures. These alerts and detailed reports are sent to teachers and administrators supporting actions to mitigate risk to the school's population. Government agencies use reports for broader community case investigation, risk assessment, and ongoing planning.

PRIVATE + SECURE

DatumSure and MyWay Health is using the Utah's state COVID-19 School Manual to ensure all data and communications are private and secure. Notifications, communications content, and workflows are driven by the standards this guide has ordered.

DatumSure is an entity-centric master data integrity management platform leveraging blockchain, intelligent automation and other technologies to help individuals, companies and organizations transform how they access, use, govern and administer data. Our platform puts data rights squarely into the hands of the individual, facilitates a universal view of the customer, helps companies slow the rising cost and risk inherent in data management and provides a way for companies to legally and ethically monetize data.

MyWay Health is a transformational health platform that empowers consumers with personal ownership and access control over their health data. Our platform removes the burden of data management from providers to let them focus on delivering the highest quality of care. We empower consumers to connect with providers across the entire spectrum of conventional, behavioral and complimentary care to achieve their personalized health goals. The MyWay Health EHR is HIPPA compliant.
